

Purpose and trigger

SYNTHETIC TRAINING ONLY. This is not clinical guidance.

After a SYNTHETIC_YELLOW result, create a follow-up plan for the current patient's primary caregiver.

The plan must retain the source quotation, trigger identifier, and requested time.

Recipient and content

Resolve the recipient only through the patient.primary-caregiver topology relation.

Use the approved synthetic follow-up template, policy, and adapter versions.

Do not put a phone number, email address, provider endpoint, secret, or raw destination in the clinical or planning request.

Planning boundary

The expected result is a version-locked request in requested state and planning_only runtime status.

The plan does not authorize, queue, send, accept a provider result, or claim delivery.

If no unique caregiver relation is available, record unassigned and do not create an effect request.
